

- One customer can buy one or many tickets
- One customer can buy one or many things at concessions
- One rewards ID can be assigned to more than one customer in a family group
- One film should sell one or many tickets/there should be many tickets sold for one film
- Each film should have many scheduled showings per day

-I honestly had way more connections based specifically on the keys, but looked at the amazon example and realized i probably overthought this, as per the norm.
